ATTACHMENTS FOR CONSTRUCTION AND MINING EQUIPMENT

MEGARIPPERS FOR EXCAVATORS

Professional LLC is engaged in its own development and manufacture of highquality Megarippers.

- ! Megaripper is excavator attachment for ripping frozen soils and rocks
- ! Megarippers consist of shortened boom and ripper arm
- ! Due to the large weight of the Megaripper and the sharp shape of arm, effective ripping of soils is achieved

Advantages of using an excavator with Megaripper compared to a bulldozer:

The volume of ripping

by the excavator with Megaripper is 1.5 times higher than by a bulldozer

The depth of ripping

by an excavator with Megaripper is more than 2 m, while a bulldozer is 0.4-0.6 m

The cost of equipment

New 50-ton excavator with standard equipment complete with Megaripper will cost 3 times cheaper than a new 70-ton bulldozer

Spare parts

At a lower cost, the service life of the excavator undercarriage is 3 times longer than that of a bulldozer

Fuel consumption

A 50-ton excavator consumes 1.5-2 times less than a 70-ton bulldozer

The maneuverability

of an excavator with a Megaripper is better than that of a bulldozer. This is well manifested in small areas

Re-equipment

An excavator with a Megaripper can be converted for soil development in just 1 day, even a 120-ton machine

The use of high-quality rolled metal, which passes strict entrance control in an independent testing laboratory

PROFESSIONAL LLC IS QUALITY!

Because of modern equipment of production workshops, all the norms of production technology are fully observed

We use reliable components: hydraulic cylinders, teeth, axles, pins and bushings of our own production
